Radial Ball Bearings Versus Angular Contact Ball BearingsRadial “Deep Groove” Ball Bearings. A radial ball bearing is a type of precision bearing where the action of the load transmitted is radial to the axis of the shaft

Ball bearings:Radial ball bearings|Products by Type:RollingThese are angular contact ball bearings with the inner ring divided into two. When the outer ring and inner ring are pushed in the radial direction, the balls make Ball bearing - WikipediaJump to Deep-groove — The purpose of a ball bearing is to reduce rotational friction and support radial and axial loads. It achieves this by using at least two
